## ABOUT ME

I am a third year Information Technology student with a passion for web development. I have experience in back-end development and enjoy working in a team environment. In addition to my technical skills, I also have strong critical thinking and problem-solving abilities, which I believe are essential for success in the field of IT. In the future, I hope to continue to grow and learn.

---

## EXPERIENCES

### PT Adma Digital Solusi

Back End Developer Internship

(August 2022 - December 2022)

As a back end developer, I was involved in CRUD (create, read, update, delete) operations for various entities, including web back-end and API services. I also contributed to the slicing of design for mobile and web views. Additionally, I worked on the administrator side of the Super Apps, Halo Coach, and Scheduling Content project. I also collaborated with front-end and UI/UX teams to ensure a seamless user experience for the end users of these applications.

### Himpunan Mahasiswa Teknologi Informasi ITS

Secretary of Research and Technology Department

(February 2022 - Present)

As a secretary, I have contributed to the Research and Technology department by creating key performance indicators (KPIs), project budgets (RAB), and organizing events such as PKTI-TD, IoT Club, and Cyber Security Club. I have also worked with department heads and staff to plan and execute these events, using my strong communication skills and attention to detail.

### A Renewal Agent (ARA) 3.0

Expert Staff of Secretarial Division

(January 2022 - June 2022)

As a contributor, I have helped provide solutions to the heads, verified and recorded participant data for the ARA 2022 event, distributed certificates to participants, and contributed to the smooth and efficient running of the secretarial division and the success of the ARA 3.0 team.

## EDUCATION

### Institut Teknologi Sepuluh Nopember

Bachelors Information Technology, 6th semester

(September 2020 - Present)

3.87

---

## PROJECTS

### UniTrend

(December 2022 - December 2022)

UniTrend is a platform that presents and analyzes data related to actual issues that are being discussed by the people of Indonesia. The data used is obtained from surveys, Google Trends data, data from social media, and other data source platforms.

### Scheduling Content

[sc.admasolusi.space](https://sc.admasolusi.space)

(September 2022 - December 2022)

Scheduling Content is a platform built using the Laravel Framework that allows users to manage multiple social media accounts from one central location. The platform allows users to schedule posts for their accounts in advance, saving time and improving their social media presence. As a contributor to the project, I was responsible for the slicing design of the landing page and some of the pages within the platform using Bootstrap to ensure a responsive and mobile-friendly design.

### HaloCoach! Toolbox

[halocoach.admasolusi.space](https://halocoach.admasolusi.space)

(November 2022 - November 2022)

HaloCoach! Toolbox is a platform built using the Laravel Framework for administrators of the HaloCoach! application. My contribution to the project includes working on voucher, subscription, and order management, as well as creating an API for subscription management that is used by the HaloCoach! application.

## Super Apps Toolbox

(September 2022 - October 2022)

Super Apps Toolbox is a platform designed for administrators of Bisnisomall, an e-commerce platform. It is built using the Laravel Framework, and its main purpose is to provide administrators with tools for managing the e-commerce platform. As a contributor to the project, I have worked on several key features, including displaying product data, updating the invoice design, and updating the product submission flow. These changes have helped to improve the functionality and usability of the platform for administrators.

## E-Money and e-Commerce REST API

(February 2022 - June 2022)

This project is an e-commerce and e-money API built using Express.js with user authentication and MySQL as the database. It can be integrated with other group's E-Money projects.

## eReview

(March 2021 - July 2021)

Marketplace website for scientific journal editors to find the most suitable reviewers and a marketplace for reviewers to look for journal review. Built using Codeigniter3.

---

## SKILLS

C, HTML, CSS, Bootstrap, JavaScript, Node.js, Express.js, jQuery, PHP, Laravel, REST API, MySQL, MongoDB, git, GitHub, gitlab, Scrum.

---

## CERTIFICATIONS

### Cloud Practitioner Essentials (Belajar Dasar AWS Cloud)
